

ReguLens.AI

Turn complex banking regulations into **actionable, traceable controls.**

The first agentic AI regulatory intelligence and control assurance platform built for Chief Compliance Officers, Risk Directors, and Internal Auditors.

CORE ARCHITECTURE

11 Autonomous Agents

PROVENANCE STANDARD

100% Traceability Chain

TOTAL ADDRESSABLE MARKET

\$54B+ Global RegTech

The \$320B Banking Regulatory Burden

Banks are failing to keep pace with the velocity, complexity, and fragmentation of regulatory mandates.

\$14.2B

Global Regulatory Fines (2025)

Non-compliance fines under RBI Banking Regulation Act (Sec 47A), FATF AML penalties, and GDPR/DPDP privacy violations continue to shatter records.

400+

Annual Regulatory Circulars

A Tier-1 bank receives over 400 circulars, notifications, and directives per year. Compliance officers spend 60% of their time manually reading 100+ page PDFs.

73%

Disconnected Spreadsheets

GRC teams maintain separate Excel sheets for policies, controls, audit findings, and risk registers with zero real-time linkage or automated alerts.

THE CORE FAILURE

When an amendment changes a requirement from *Annual to Quarterly*, existing controls silently fail because IT batch schedulers and policy documents are not linked.

ReguLens AI: The Autonomous GRC Operating System

An intelligent agent swarm that autonomously bridges external regulations and internal bank operations.

01 • INTELLIGENCE

Autonomous Ingestion & Parsing

Continuously monitors regulatory gazettes, extracts atomic obligations with frequencies and ownership, and classifies legal diffs in seconds.

02 • ASSURANCE

Evidence-Grounded Control Mapping

Maps obligations to internal controls with explainable confidence scoring. Automatically audits evidence logs for expiration and insufficiency.

03 • ACTION

Risk Prioritization & Remediation

Ranks gaps using multi-factor penalty calculations. Synthesizes step-by-step remediation plans with Human-in-the-Loop CCO approvals.

80%

Reduction in Review Time

100%

Audit Trail Traceability

Zero

Blind Hallucination Risk

< 2 min

Impact Blast Radius Simulation

The Secret Sauce: Unbroken Traceability & Multi-Agent Swarm

Why generic LLMs fail in banking compliance and how ReguLens AI solves the grounding challenge.

TRADITIONAL GRC & GENERIC CHATBOTS

- ✗ **Hallucination Risk:** Generates plausible legal advice that doesn't match real banking circulars.
- ✗ **Static Data:** Legacy GRC tools (ServiceNow, MetricStream) require armies of consultants to manually type fields.
- ✗ **Disconnected Evidence:** No automated verification that batch logs actually executed on the mandated schedule.
- ✗ **Blind Recommendations:** Cannot simulate what happens if a cadence changes from Annual to Quarterly.

REGULENS AI COGNITIVE MOAT

- ✓ **100% Deterministic Grounding:** Every recommendation cites exact gazette sections (e.g. RBI Section 12.4).
- ✓ **11 Autonomous Specialized Agents:** Isolated agents for ingestion, mapping, evidence audit, and risk ranking.
- ✓ **Real Evidence Auditing:** Flags expired certificates (EVD-0112) and cadence mismatches (EVD-0092).
- ✓ **What-If Simulation Engine:** Instant visual blast radius showing affected controls, teams, and gaps.

TAMPER-EVIDENT TRACEABILITY PROVENANCE:

Regulation → Obligation → Applicability → Controls → Evidence → Testing → Gaps → Risk Prioritization → Remediation → Audit Log

A \$54 Billion Market at an Inflection Point

Banks are shifting IT budgets from reactive consulting hours to autonomous AI compliance platforms.

TAM (TOTAL ADDRESSABLE MARKET)

\$54.8B

Global Governance, Risk & Compliance (GRC) and RegTech software market, projected to reach **\$134B by 2032 (CAGR 14.2%)**.

SAM (SERVICEABLE ADDRESSABLE)

\$18.4B

Tier-1 and Tier-2 Commercial Banks, Digital Lenders, Wealth Managers, and FinTechs in high-scrutiny jurisdictions (India, US, UK, EU, Singapore).

SOM (INITIAL SERVICEABLE OBTAINABLE)

\$1.2B

Scheduled Commercial Banks and Neo-Banks in India and Cross-Border European hubs managing RBI, DPDP, Basel III, and DORA resilience standards.

Macro Tailwinds Driving Adoption

 **Regulatory Velocity:** Real-time amendments across digital lending, cyber, and ESG.

 **Regulatory Scrutiny:** RBI & EBA on-site audits now mandate technical proof of control frequency.

 **CFO Mandate:** Reducing multi-million dollar annual spending on manual consulting reviews.

Production Prototype: Complete Feature Suite

Demonstrated end-to-end with 11 regulations, 43 obligations, 32 controls, and 7 prioritized gaps.

Executive Dashboard

87% Coverage KPI, domain breakdown charts, risk distribution donut, and instant critical gap alerts.

Regulatory Horizon

Version-tracked circulars with word-level diff comparison (Added, Removed, Modified text highlights).

Traceability Map

Connected node graph linking Regulation → Obligation → Control → Evidence → Gap → Remediation.

What-If Simulation

Interactive hypothesis modeling: Frequency Annual → Quarterly with blast radius graph.

Remediation Kanban

GRC workflow board with Human-in-the-Loop CCO approvals and immutable audit logging.

Cross-Reg Matrix

Multi-jurisdiction harmonization identifying 100% control reuse and resolving legal friction points.

Compliance Copilot

Grounded natural language Q&A with verifiable source citations and actionable shortcuts.

Global Search & Ingest

Instant Ctrl+K search across all entities + drag-and-drop PDF/DOCX/CSV document ingestion.

Enterprise B2B SaaS Business Model

Tiered enterprise subscription based on monitored controls, regulatory jurisdictions, and active agent threads.

FINTECH & NEO-BANKS

\$48,000 /year

- Up to 50 active internal controls
- 5 Jurisdictions / Regulatory bodies
- Core Agent Swarm & Copilot
- Weekly automated horizon scanning

SCHEDULED COMMERCIAL BANKS

\$180,000 /year

- Up to 250 active internal controls
- Unlimited regulations & circulars
- What-If Simulation Engine
- Immutable audit trail with CSV export
- 24/7 autonomous monitoring & alerts

GLOBAL MULTI-ENTITY TIER 1

\$450,000+ /year

- Unlimited enterprise controls
- Multi-subsidiary governance matrix
- On-premise / private cloud deploy
- Custom LLM / local model integration
- Dedicated SLA & compliance engineer

GROSS MARGIN

91.4%

ESTIMATED LTV / CAC

6.2x

NET DOLLAR RETENTION

135%

Competitive Positioning & Landscape

How ReguLens AI leapfrogs legacy GRC platforms and generic enterprise chatbots.

Capability / Vector	ReguLens AI	Legacy GRC (ServiceNow)	RegTech (MetricStream)	Generic AI Chatbots
Autonomous Clause Extraction	✓ Native Swarm	X Manual Entry	Partial Keyword	Unstructured Text
Cadence Mismatch Detection	✓ Automated	X None	X None	X None
Live Evidence Expiry Audit	✓ Automated	Manual Upload	Manual Upload	X Cannot Audit
What-If Blast Radius Simulation	✓ Traversal Graph	X None	X None	X None
100% Provenance Traceability	✓ End-to-End	Partial	Partial	X Black Box / Hallucinates
Implementation Time	< 2 Weeks	6-12 Months	4-9 Months	Days (Unreliable)

Development Milestones & Product Roadmap

From hackathon prototype to institutional enterprise deployment.

PHASE 1 (COMPLETED)

Production Prototype

- 11 Specialized AI Agents
- 14/14 Target Capabilities
- Full Traceability Pipeline
- Live on GitHub Pages

PHASE 2 (Q4 2026)

Core Banking Connectors

- Finacle / Temenos API sync
- Direct batch scheduler hook
- Automated ticket dispatch to Jira / ServiceNow GRC

PHASE 3 (Q1 2027)

Multi-Jurisdiction Global

- US SEC / OCC / Fed modules
- UK FCA / PRA framework
- Real-time official gazette web-crawling webhooks

PHASE 4 (Q2 2027)

Autonomous Self-Remediation

- Auto-generate draft policy text
- Automated SQL batch schedule migration scripts
- Continuous auditor portal

CURRENT STATUS: Production Hackathon Prototype fully deployed, validated, and interactive at <https://nihal-client33.github.io/ReguLensAI/>

✦ THE FUTURE OF BANKING COMPLIANCE

Turn Regulations into Actionable Controls with ReguLens AI

Join us in empowering global banks to achieve continuous regulatory assurance, zero audit surprises, and seamless compliance operations.
